

MUHAMMED RIZAL N P

Software Developer

Kozhikode, Kerala

+91 7736361739 — mdrizalnp@gmail.com — GitHub — LinkedIn

Professional Summary

Software Developer with experience building scalable, secure, and maintainable enterprise web applications using ASP.NET Core, .NET Framework 4, React.js, and SQL databases. Skilled in microservices architecture, RESTful API development, JWT authentication, Clean Architecture, frontend engineering, debugging, remittance applications, anti-money laundering systems, and Agile software engineering practices.

Technical Skills

Backend Technologies: C, ASP.NET Core, .NET 8, ASP.NET Web API, RESTful APIs, Python, FastAPI, Uvicorn, Pydantic, SQLAlchemy, Entity Framework Core, Dapper, LINQ, Middleware, Dependency Injection, Clean Architecture, Microservices Architecture, YARP API Gateway, Background Services, API Design

Frontend Technologies: React.js, TypeScript, JavaScript (ES6+), Vite, React Router, Redux Toolkit, React Context API, Custom Hooks, HTML5, CSS3, Tailwind CSS, Responsive UI Design, Framer Motion, Axios, Component-Based Architecture, State Management, API Integration

Database Technologies: MS SQL Server, PostgreSQL, Oracle Database, MongoDB, SQLite, Redis, Entity Framework Core, SQLAlchemy, Database Design, Data Modeling, Query Optimization, Caching, Database Migrations

Messaging Real-Time Technologies: Apache Kafka, Event-Driven Architecture, WebSockets, SignalR, REST, Asynchronous Programming, Message-Based Communication, Real-Time Data Streaming

Authentication Security: Keycloak, JWT Authentication, OAuth2, OpenID Connect, Role-Based Authorization, API Security, Protected Routes, Axios Interceptors, Middleware Security, CORS, Environment Variables, Secrets Management

Programming AI Technologies: Python, C, Generative AI, Large Language Models (LLMs), AI Agents, Agentic AI, Prompt Engineering, Context Engineering, Retrieval-Augmented Generation (RAG), Semantic Search, Embeddings, Vector Search, AI Memory Systems, Intent Detection, Task Planning, Tool Calling, AI Workflows, Multi-Provider AI Systems, OpenAI, Google Gemini, Anthropic Claude, OpenRouter, Ollama

Cloud, DevOps Tools: AWS, Amazon EC2, Amazon S3, AWS IAM, AWS RDS, Docker, Docker Compose, Git, GitHub, GitHub Actions, CI/CD, Postman, Swagger/OpenAPI, Vercel, Render, Visual Studio, VS Code, Antigravity, Cloudinary, Linux, Environment Configuration, .env Management

Software Engineering Practices: Object-Oriented Programming (OOP), SOLID Principles, Clean Code, Clean Architecture, Layered Architecture, Feature-Based Architecture, Microservices, API Gateway Architecture, Event-Driven Architecture, SaaS Architecture, AI System Architecture, Unit Testing, Integration Testing, Debugging, Code Reviews, Agile Methodologies (Scrum), Sprint Planning, Daily Standups

Experience

Software Developer

Distinct Infotech Solutions

Jan 2026 – Present

- Worked on enterprise-level remittance and foreign exchange applications using ASP.NET WebForms and .NET Framework 4.
- Contributed to the development and maintenance of Casmex remittance and forex management software.
- Integrated anti-money laundering workflows and compliance-related modules into financial transaction systems.
- Performed debugging, issue fixing, and enhancement of existing legacy applications in production environments.
- Worked with Oracle Database, Oracle SQL Developer, AJAX, ASP.NET AJAX, and ADO.NET for backend operations and data management.
- Collaborated with development teams to maintain secure and optimized financial software solutions.

May 2025 – Dec 2025

- Developed responsive and user-friendly frontend interfaces using React.js, Redux Toolkit, and Tailwind CSS for scalable web applications.
- Built and integrated RESTful APIs using ASP.NET Core Web API following Clean Architecture principles and industry best practices.
- Implemented secure JWT-based authentication and role-based authorization across multiple application modules.
- Developed optimized database access layers using Entity Framework Core and Dapper for efficient performance.
- Collaborated within Agile Scrum teams, participating in sprint planning, code reviews, debugging, and delivery.
- Used Git and GitHub for source control management, branching strategies, and pull request workflows.

Projects

Nikki AI OS – Personal AI Desktop Operating System

- Built a JARVIS-inspired AI desktop assistant using Electron, React, TypeScript, FastAPI, Python, and SQLite with a modular AI operating system architecture.
- Developed an intelligent core with context management, persistent memory, intent detection, task planning, tool registry, execution engine, conversation management, and learning capabilities.
- Integrated multiple AI providers including OpenRouter, OpenAI, Gemini, Anthropic, and Ollama with health checks, provider prioritization, automatic fallback, and resilient response handling.
- Implemented desktop automation, voice interaction, WebSocket communication, text-to-speech, project management, knowledge retrieval, and extensible tool-based execution workflows.
- Designed the system for scalable AI-agent workflows with modular architecture, automated testing, provider abstraction, and Electron application packaging for desktop deployment. ““

Servexa – Salon & Spa Booking Platform

- Built a full-stack salon and spa booking platform using React.js, Tailwind CSS, and ASP.NET Core Web API.
- Developed booking management, user management, and service management modules with secure authentication and role-based access control.
- Implemented JWT authentication for Admin, Shop Owner, and Customer modules.
- Used Dapper and Clean Architecture for scalable and maintainable backend development.
- Designed responsive user interfaces optimized for desktop and mobile devices.

Casmex – Remittance, Forex, and Incoming Exchange Software

- Worked on remittance and foreign exchange management modules for financial transaction processing.
- Developed and maintained ASP.NET WebForms and .NET Framework 4 based enterprise applications.
- Implemented database operations using Oracle Database and ADO.NET.
- Enhanced application performance, debugging, and production issue resolution for financial systems.

IShield – Anti Money Laundering Application

- Worked on anti-money laundering application integrated with money transfer and remittance systems.
- Developed compliance-related workflows and transaction monitoring functionalities.
- Contributed to secure transaction validation and suspicious activity monitoring modules.
- Maintained and enhanced enterprise financial compliance applications using ASP.NET technologies.

Certifications

Full Stack Project Certification

Python (Flask), React.js, MySQL

Technical Workshop – Tata Elxsi

Automotive Embedded Systems and Emerging Technologies

Education

Bachelor of Science in Computer Science

Peekay CICS Arts and Science College, Calicut University

Sep 2022 – Mar 2025
